

Nomogram for the preliminary design of solar district heating plants for various collector types at medium network temperatures – reading example

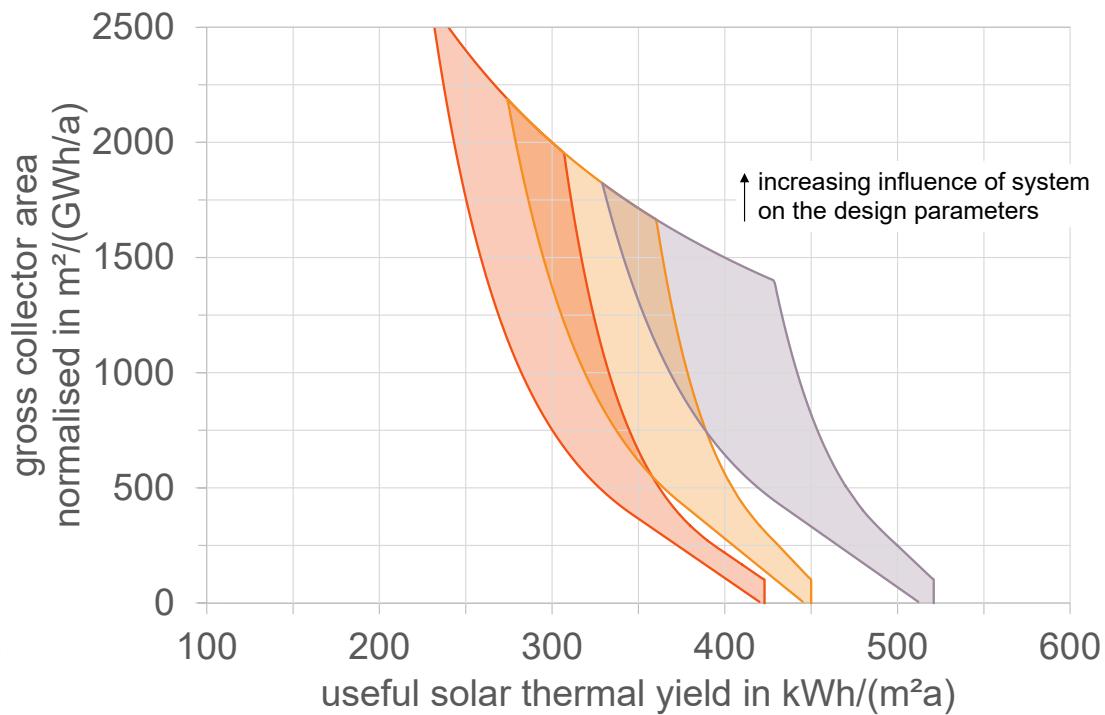

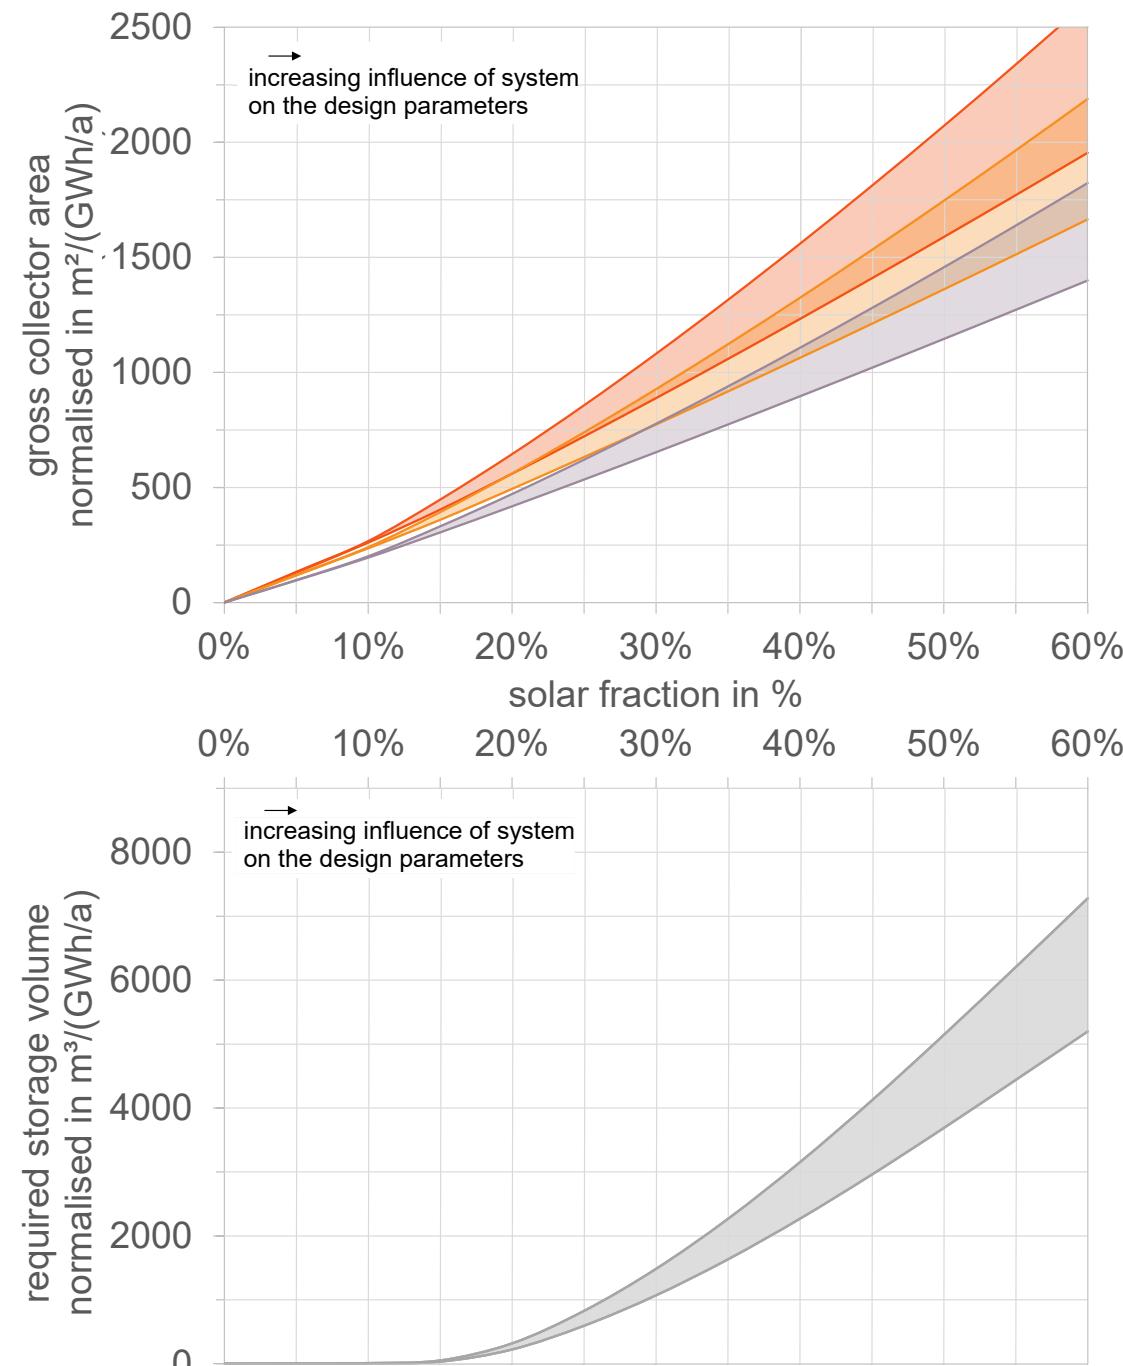

© solites

version 1.0
available at
www.scfw.de

collector type		
HT-FPC	ETC	CPC
heat demand at the integration point of the DH network	2 ... 40 GWh/a	valid for all collector types

gross collector area and storage volume normalised to the
heat demand in the district heating (DH) system;
applies to **network temperatures of S 70 / 55 °C; W 80 / 50 °C**
at Würzburg under average summer load conditions

Nomogram for the preliminary design of solar district heating plants for various collector types at medium network temperatures

collector type		
heat demand at the integration point of the DH network	2 ... 40 GWh/a	valid for all collector types
	HT-FPC (orange bar)	ETC (orange bar)
	CPC (purple bar)	(grey bar)

gross collector area and storage volume normalised to the heat demand in the district heating (DH) system;
applies to **network temperatures of S 85 / 70 °C; W 100 / 65 °C**
at Würzburg under average summer load conditions

Nomogram for the preliminary design of solar district heating plants for various locations at medium network temperatures

www.scfw.de

	location		
	Munich	Würzburg	Hamburg
heat demand at the integration point of the DH network	2 ... 40 GWh/a	2 ... 40 GWh/a	2 ... 40 GWh/a

gross collector area and storage volume normalised to the heat demand in the district heating (DH) system;
applies to **network temperatures of S 70 / 55 °C; W 80 / 50 °C**
and high-temperature flat plate collectors (HT-FPC) under average summer load conditions

Nomogram for the preliminary design of solar district heating plants for various summer loads at medium network temperatures
